Thermo-Structured Surface

Nature Plus is a particleboard panel clad in thermo-structured surface that replicates both the look and feel of natural decorative finishes.

A Thermo-Structured Surface is a decorative panel pressed at high pressure with a layer of kraft paper between the board and the decorative surface. This provides increased texture depth without affecting the structure and stability of the panel, improved scratched and abrasion resistance. These boards are often referred to as TSS or a technical veneer. The decorative papers are treated with a 100% pure melamine resins. Panels dimensions: 81 1/2 in x 110 1/2 in (207 x 281 cm)
